Comparison against ground truth, by region

A whole-image figure can hide opposite regional errors that cancel. The whole image is shown as its own row for that reason.

Map	Region	Bias	MAE	RMSE	Error CoV	Corr.	Voxels
KTRANS	Whole image	0	0	0	273.38%	0.99	1596595
KTRANS	gray matter	0	0	0	15.04%	0.694	4960

Issues and recommendations

Severity	Submission	Message	Affected file	Recommended action
● Needs review	submission	No dataset folder was found, so every scan was treated as 'synthetic' (1 participants, 2 repeats and 3 sites match only synthetic). Counts below are checked against that dataset's grid.	Not specified	Review before sharing.

Notes and limitations

- Warnings indicate files or metadata that may need review but did not prevent report export.
- QC checks NIfTI readability and voxel statistics. BIDS checking, where a challenge enables it, covers layout and naming only, not the full specification.
- Reference metrics are generic comparisons, not official OSIPI scoring. No official overall DCE score, pass/fail result, or ranking was calculated.
- Repeatability CoV is unavailable: it requires repeated (noise-varied) datasets, which have not been provided. ICC was not calculated: this challenge has not selected an ICC model. All six Shrout & Fleiss models are implemented; set `grouped_statistics.icc.model` to enable one. The reported coefficient of variation is an accuracy error-CoV, not a repeatability CoV.
